

# Driving Your Association Into The Ditch - The Vicious Cycle Of "Keeping Fees Low"

—

A condominium unit owner recently  
shared “We have a great board of  
directors. We haven’t had a fee increase  
in 11 years.” **Little do they realize their  
boast was more of a confession.**

—

**With this perspective, we see a critical mistake so many association boards make. In a desire to keep assessments from going up, many association boards set a course that will steer their association straight into the ditch.**

**Costs increase. This is an irrefutable fact of any modern economy. If your association fees have not increased AND have not increased in a substantive way, your association is likely headed into a vicious cycle that will require painful intervention to break.**

## HOW DOES IT BEGIN?

An association has annual operating expenses they incur every year. This includes things like mowing, utilities, cleaning, trash removal, insurance and other costs required to maintain daily operations. These expenses, which will eventually increase even after intense cost-conscious bidding and negotiating, must be funded annually or they are not received. Thus “keeping fees low” necessitates either reducing or abandoning those products or services (at the cost of the appearance and performance of the association), or reallocating money intended for other purposes.

*Pop Quiz!*: “Where, within an association budget, can a board reallocate money to cover increasing annual expenditures without raising association fees?” If you said, “*Cut back on RESERVE FUNDING,*” you’ve played this game before! While a statistical analysis has not been done, anecdotally this author is willing to bet 80% of all associations have made this very decision at one point or another. (Note: If someone undertakes an actual statistical analysis, “bet the over” with respect to the real percentage.) Most associations have chosen to underfund their reserves in order to “keep assessments low” today. The roof, the siding, the parking lot... those

expenditures only come up once every 20+ years. You can kick that can down the road for many budget cycles before “it” hits the fan.

All the motivation is there: “We have unit owners on fixed income,” or “We want to keep fees low to help units sell,” or “I just don’t want unit owners mad at me!” This is how it begins.

## THE VICIOUS CYCLE:

Operating costs increase over time, so the association board underfunds its reserves to “keep fees low” and everyone is happy.

Because of underfunding, the association’s reserve fund is inadequate to finance major capital projects, such as the roof.

The association defers its roof replacement because it didn’t have enough money and a special assessment wouldn’t be popular to homeowners. NOT everyone is happy! Some unit owners who bought a well-maintained and/or like-new condition condo do not want to sacrifice appearance and performance of their property just to save some nominal fee increases. Smart well-funded owners see the writing on the wall and put their unit up for sale. The eventual buyers of listed units, by the very nature of the reality on the property, will be people who are willing to sacrifice property appearance for lower assessments. The property had some deferred maintenance, BUT the price was right and the fees were low, so they bought.

The association ends up with some unexpected expenses for water damage from roof leaks. The Association finally replaces its roofs 5 years later than they should have, spending more money to re-deck the roof due to water damage. Not to mention the increased cost of the roof because the price of materials rose from where they were five years ago. DISASTER AVERTED? NO! The siding is now looking really bad but the association

doesn't have the reserve funds to replace it. That's OK! We've played this game before. DEFER siding replacement. It's only aesthetics! But now MORE people are unhappy.

## SPIRALING OUT OF CONTROL:

The property is in trouble. They scraped together enough money to replace roofs (later than they should have) but the reserve fund is severely depleted. The siding looks terrible, and the property now has a significant deficit in "curb appeal," but they aren't in a great place to remedy the situation. A special assessment would not be well received. When it came up at a board meeting, tensions were high and the board members were afraid of making it back to their units safely. The board Treasurer who saw this coming resigned, stating he doesn't need the stress. The board, trying to be compassionate to unit owners who are on fixed incomes and very sensitive to fee increases, cuts back on operating costs to try to funnel money into the reserve. They extend the painting cycle. The property condition deteriorates even more. Over the past few years, the well-funded buyers saw what was coming and moved out. Unit sales prices declined significantly. Sellers took a hit because the property was now in poor condition, but they were relieved to get out of their units. Any money they saved in lower association fees was negated by either seeing their investment fail to increase or worse yet, decline in value. Incoming unit owners are now EXTREMELY cost-conscious, attracted to a lower sale price and lower fees to purchase a condo in a formerly sought-after association. They were eager to get into a unit for a "steal" and they could swing the low association fees as well. These unit owners will have a difficult time affording the "true" cost to live in their association, not to mention the cost to make up for 20+ years of underfunded reserve contributions.

**For all the effort to "keep fees low," the association has driven itself into the financial ditch.** They were not frugal or fiscally responsible. They followed the path of least resistance and made a series of bad decisions, each of which made the financial situation worse and made the remedy more unattainable. The people who could have, and should have, contributed appropriately to fund reserves left new unit owners who tended to be more cost-sensitive (willing to accept a less attractive property because the "fees were low") with a double whammy: The cost to maintain a property PLUS the cost to make up for 20+ years of underfunded reserves. Congratulations board of directors! Your decisions, over time, resulted in a community full of residents who could

not afford to live there. Most associations survive. Some do not. **The properties that survive have a painful recovery that typically involves bank loans and fee increases but few return to their original glory. The sad part is, it didn't have to be that way.**

## THE VIRTUOUS CYCLE:

In contrast to the above (all-too-common) scenario is an association that understands that "keeping fees low" should never be the primary goal of the board of directors. While a board can do its due diligence with vigorous bidding and negotiation of annual expenditures to ensure fee increases are not excessive, but rather are stable and equitable, planned fee increases should not be avoided. Proper reserve funding ensures your association will remain a sought-after property for generations to come.

With the exception of construction defect issues and lengthy developer construction timelines (referencing Transition Defect Studies and/or Retrospective Reserve Studies), all associations start their journey in mint condition on sound financial footing. Notwithstanding legacy "drive-by boilerplate reserve studies," a quality detailed reserve study from an experienced provider is the first step to ensuring financial solvency and prosperity for your association. A quality reserve study is not a forgone conclusion. Boilerplate-type reserve studies give associations reason to question the results of the study which opens the door to inaction. Example: "The reserve provider didn't even go up on the roof, how can they say it will only last 15 more years?" **Start with a quality reserve study in which you can trust the results.** With every year that goes by without proper funding of reserves, your association increases the risk of falling into the vicious cycle described above.

## EYES WIDE OPEN:

An association that properly funds the reserve fund from the beginning will be giving current and future unit owners an accurate financial picture of what it truly costs to live in an association. In addition, as a result of having a quality reserve study, a board will be able to communicate to unit owners exactly what the fee schedule will look like for the next 5 years (the average useful life of a reserve study before an update is conducted). Proper reserve funding ensures that adjustments to the association fee schedule after a reserve study update will be minimal. Being new, the property is in top condition. A unit owner who, unfortunately, finds the monthly assessments difficult

**As a result of having a quality reserve study, a board will be able to communicate to unit owners exactly what the fee schedule will look like for the next 5 years**

to afford will realize it very quickly and have the opportunity to sell their like-new unit, maximize their sale price, and purchase a more affordable (for them) home. Prospective buyers will purchase a unit that is in like-new condition with eyes-wide-open with respect to the true cost to live there and the planned inflationary assessments increases.

## HAVE YOUR CAKE AND EAT IT TOO:

The association is properly funded. The need for special assessments is virtually eliminated. Everyone who lives in the association understands the true cost to live there. Everyone is paying “a little more” than an association that is not funding their reserve, but they are enjoying a property that is in top condition. They enjoy the pleasing aesthetic value and performance of properly maintained buildings. Their guests who visit see a beautiful property with great curb appeal. They minimize issues like water infiltration and asset failure. When the time comes for select unit owners to sell, they will get TOP dollar for their unit. They enjoyed a great-looking property the entire time they lived there, and they were rewarded for it with getting that money back in the form of a highly appreciated value of their asset on sale. They had their cake and ate it, too. Their association will attract the kind of buyers that are wanted in the property: well-funded unit owners who wanted a property in top condition and were willing to pay for it. Prospective buyers seeking “low condo fees” looked elsewhere, thankfully.

When the time comes for planned projects the association has the funds to conduct roof replacements, siding replacements and parking area replacements as needed and without having to defer and sacrifice performance or aesthetic appeal. Everyone is happy. The virtuous cycle continues. Properly fund reserves, conduct projects in a timely manner, enjoy the beautiful property every day, and get rewarded with higher and higher unit sale prices. Who would chose to do it any other way?

**If your association is not properly funding the reserves, you will suffer the consequences.** You cannot escape the consequences of underfunded reserves. **You do not save money by underfunding reserves and “keeping fees low.”** You are not doing unit owners a favor by misrepresenting the true cost to live in an association and devaluing their most valuable asset with deferred maintenance. That is not compassionate. If you don't fund your reserves you will pay for it through future special assessments, a lower sale price when you sell your unit, or both. **Why not have your cake and eat it too?**
